## 020101 NVIS HF Unloaded Antenna

**(Suitable for manual and automatic antenna tuning units)**

The model 020101 antenna is a rugged fiberglass antenna built for use on either automatic or manual antenna tuning units.

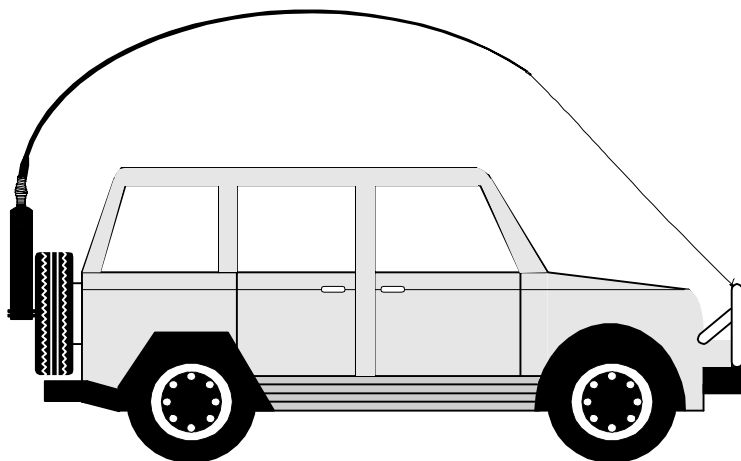

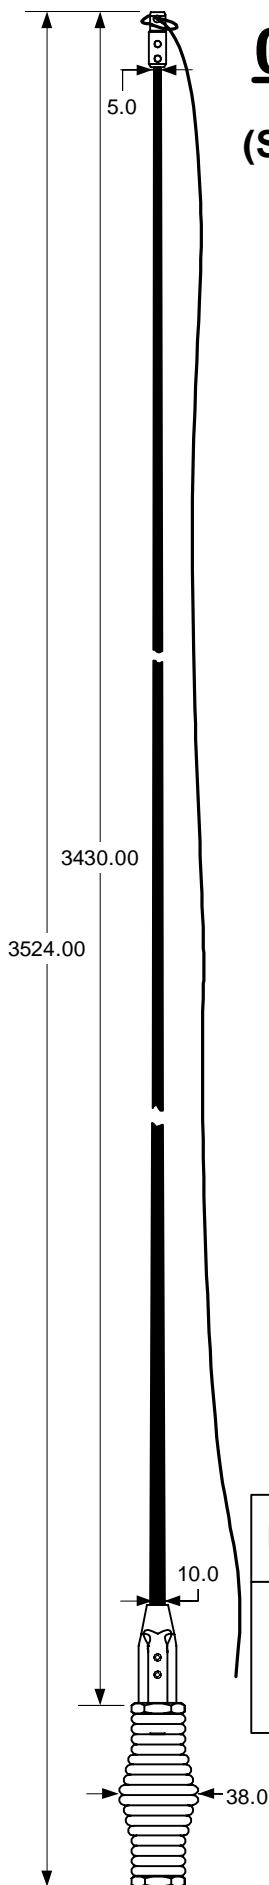

Its heavy duty solid fiberglass rod and robust fittings are designed to withstand very rough environments.

The 020101 antenna radiating section is a Matt Black epoxy coated, solid fiberglass tapered rod section, with a flexible Stainless Steel radiator core.

Whip top and bottom fittings are constructed of Brass, finished in a Black Chrome Plating, and fixed into position with grub screws and epoxy adhesive.

The antenna comes with a 4 Metre Black Nylon tie down cord for the securing of the antenna at horizontal angles required for radiation pattern variations.

The antenna is to used on a Black Spring Model 02773BK
