

02402 Unity Gain Antenna Tuning Chart

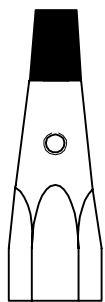

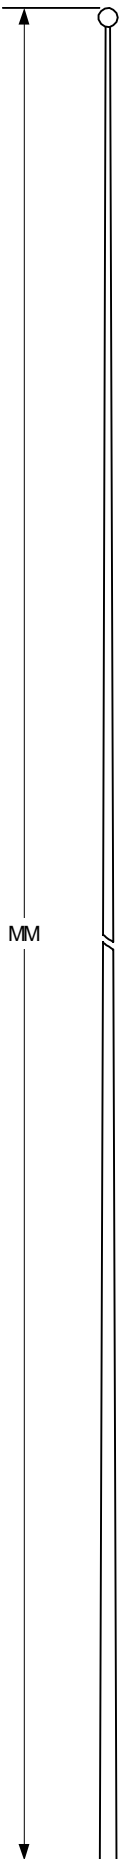

Please Note - This tuning chart is to be used as a guide to the approximate length of the whip top only.

It is essential that the antenna be properly tested using a VSWR meter or similar device for measuring VSWR or reflected power after installation.

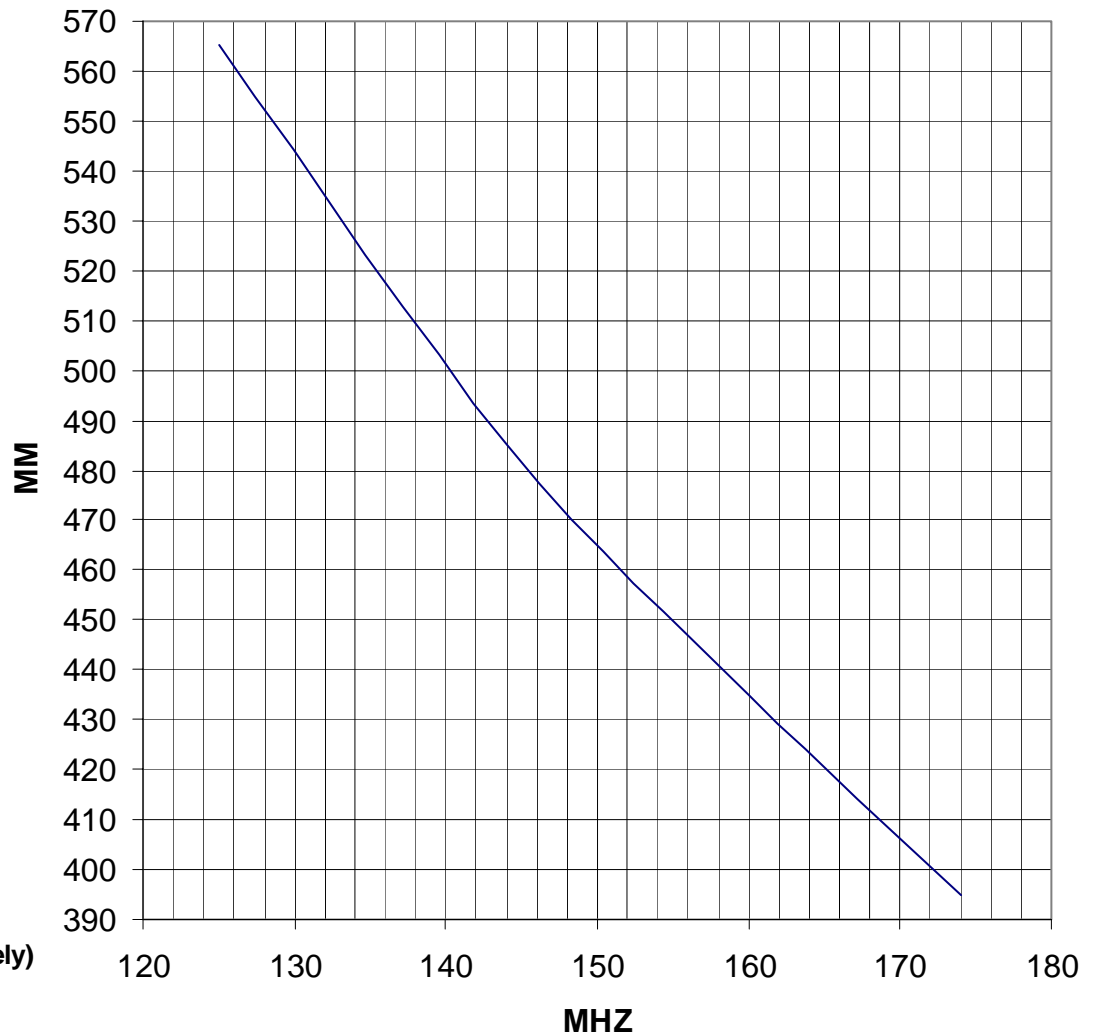

The proper way to cut the whip is using an angle grinder or a fine file to cut through approximately 30% of the diameter of the whip, then use a vice grip and a pair of pliers to break off the end.

Do not attempt to use side cutters or bolt cutters as they will get damaged.

Please use eye protection.

02410
(Sold separately)

NOTE: All results are with antenna mounted in centre of roof.
It is not recommended that this antenna be used in gutter mount applications, for gutter mounting application see model 02515C.
