

02610 Tuning Chart

The model 02610 antenna is a quarter wave UHF flexible antenna intended for use on the 02740 UHF Mobile Base.

This antenna is not recommended for use on gutter grips, or other temporary mobile brackets, the use of this antenna in such applications will result in degradation of both radiation pattern and VSWR performance.

For antennas to suit gutter grips and other temporary brackets please see our ground independent range antennas.

Although this antenna does offer a broadband VSWR response, please ensure to check the VSWR on installation.

Unless otherwise stated all dimensions are in Millimeters.
