

Part No **020301**

Portable Guide Elevation Kit

The Portable Guide Elevation Kit is a lightweight, transportable pole construction kit for use as a temporary 5m-tower solution in the field.

Not recommended as a permanent base station setup, this is a lightweight option that comes complete in an easy to carry and highly portable package.

The kit rolls out easily for quick transport and weighs 5.5 kg. When constructed, the tower stands 5m high and is designed to withstand wind shear and extreme conditions.

The kit comes complete with all necessary tools for installation, making it a quick and easy solution to temporary, portable HF tower needs.

Application

Suitable for Long Wire HF Base antennas

Features

- ✓ Light weight & extremely portable
- ✓ Easy to setup, ready to go in minutes (Only requires one person to setup)
- ✓ Designed to withstand harsh environments
- ✓ Kit contains all necessary tools and accessories to assemble
- ✓ Suitable for Long Wire HF Base antennas
